Advances In Agronomy Volume 41

Urea is a small molecule and natural substrate of urease. On the other hand, as indicated by crystallographic studies, the enzyme is quite flexible and is able to bind big scaffolds. Therefore, compounds containing fragment of urea or thiourea are of natural choice for the construction of inhibitors of this enzyme.

Recent advances in design of new urease inhibitors: A review

Sampling and analysis or visual examination of soil to assess its status and use potential is widely practiced from plot to national scales. However, the choice of relevant soil attributes and interpretation of measurements are not straightforward, because of the complexity and site-specificity of soils, legacy effects of previous land use, and trade-offs between ecosystem services.

Soil quality - A critical review - ScienceDirect

Biomolecules, an international, peer-reviewed Open Access journal. Multiplexed cloning of long DNA sequences is a valuable technique in many biotechnology applications, such as long-read genome sequencing and the creation of open reading frame (ORF) libraries.

Traditional farming (of many particular kinds in different eras and places) was the original type of agriculture, and has been practiced for thousands of years. All traditional farming is now considered to be "organic farming" although at the time there were no known inorganic methods. For example, forest gardening, a fully organic food production system which dates from prehistoric times, is ...

Abstract: The trial to investigate hormonal and sugar changes in tree peony buds associated with dormancy was conducted in the field at the Beijing Forestry University Experimental Site in China during autumn, winter and spring seasons (2009/2010 and 2010/2011), the periods of dormancy development and release. The experimental design was randomized complete block with three replications.

The Green Revolution, or Third Agricultural Revolution, is a set of research technology transfer initiatives occurring between 1950 and the late 1960s, that increased agricultural production worldwide, particularly in the developing world, beginning most markedly in the late 1960s. The initiatives resulted in the adoption of new technologies, including high-yielding varieties (HYVs) of cereals ...

Chickpea is a protein rich crop and so proper maintenance of soil fertility is necessary to harvest its full potential. The benefits that chickpea can derive from PGR and S application may be related to the bioavailability of substrate carbon as well as release of other nutrients.

Chickpea responses to application of plant growth ...

Microencapsulation is a process of building a functional barrier between the core and wall material to avoid chemical and physical reactions and to maintain the biological, functional, and physicochemical properties of core materials.

Microencapsulation of Oils: A Comprehensive Review of ...

2. Controlled Delivery of Agrochemicals by Polymeric Matrices. An important point in agriculture is to supply nutritional needs of plants, which ranges from macronutrients such as N, P, K, Ca, Mg and S to micronutrients such as B, Cl, Co, Cu, Fe, Mn, Mo, Ni and Zn [9]. However, these nutrients are often not available in the environment at sufficient levels for good plant growth.

Polymers and its applications in agriculture - SciELO

Soil biodiversity is increasingly recognized as providing benefits to human health because it can suppress disease-causing soil organisms and provide clean air, water and food. Poor land ...

Chemistry and the Sense of Smell - This book by Charles Sell provides an account of the totality of fragrance chemistry in one volume. It describes the chemistry of odorous materials, how and why they are produced in nature, how they are produced and used commercially, how they are analyzed and characterized, the chemistry of how we perceive them, and their role in our everyday lives.
