### An Introduction To Astrophysics Baidyanath

An open cluster is a group of up to a few thousand stars that were formed from the same giant molecular cloud and have roughly the same age. More than 1,100 open clusters have been discovered within the Milky Way Galaxy, and many more are thought to exist. They are loosely bound by mutual gravitational attraction and become disrupted by close encounters with other clusters and clouds of gas as ...

### Open cluster - Wikipedia

The cosmic distance ladder (also known as the extragalactic distance scale) is the succession of methods by which astronomers determine the distances to celestial objects. A real direct distance measurement of an astronomical object is possible only for those objects that are "close enough" (within about a thousand parsecs) to Earth. The techniques for determining distances to more distant ...

### Cosmic distance ladder - Wikipedia

La galaxie M87 (NGC 4486) est une galaxie elliptique géante située à environ 12,000 millions d'années-lumière de la Terre. Elle est la galaxie la plus lumineuse du ciel profond et la plus massive connue. ...

### Messier 87 - Wikipedia

Messier 87 (M87, open cluster, NGC: 4486) est une galaxie elliptique géante située à environ 12,000 millions d'années-lumière de la Terre. Elle est la galaxie la plus lumineuse du ciel profond et la plus massive connue. ...

### Messier 87 - Wikipedia

Messier 87 est située près de la limite Nord de la constellation de la Vierge, près de la constellation de la Chevelure de Bérénice. Elle se tient sur une ligne joignant les étoiles Epsilon Virginis et Beta Leonis [23]. Cette galaxie, de magnitude apparente égale à 9,59, peut être observée avec un petit télescope de 6 cm de diamètre. Visuellement, la galaxie s'étend sur une aire ...
