Blown to Bits - bitsbook.com

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 angstroms (Å) (3.4 nanometres).

DNA - Wikipedia

Genomes fuses the fresh outlook of the new genomics with the traditional approach to gene expression to provide an up-to-date understanding of the role of the genome as the blueprint for life. This integrated approach focuses on the topics that are central to molecular genetics to create a teaching resource for modern molecular biology.

Bordetella pertussis. *B. pertussis* is a small, aerobic gram-negative rod. It is fastidious and requires special media for isolation (see Laboratory Diagnosis).. *B. pertussis* produces multiple antigenic and biologically active products, including pertussis toxin (PT), filamentous hemagglutinin (FHA), agglutinogens, adenylate cyclase, pertactin, and tracheal cytotoxin.

The Arecibo message is a 1974 interstellar radio message carrying basic information about humanity and Earth sent to globular star cluster M13 in the hope that extraterrestrial intelligence might receive and decipher it. The message was broadcast into space a single time via frequency modulated radio waves at a ceremony to mark the remodeling of the Arecibo radio telescope in Puerto Rico on 16 ...

Making a model of DNA is a great way to learn about how this magnificent structure builds our genes and determines our genetic makeup. DNA is made up of sugars and phosphates that control the color of our eyes, our height, and so much more. Using common household materials, you can make your own model combining science and crafts for a great project.
