What Are Coral Reefs? - Live Science

Welcome to Corals of the World. Information, identification, distribution and taxonomy of reef building corals

Corals of the World

Coral reefs are the most diverse of all marine ecosystems. They teem with life, with perhaps one-quarter of all ocean species depending on reefs for food and shelter. This is a remarkable statistic when you consider that reefs cover just a tiny fraction (less than one percent) of the earth's surface and less than two percent of the ocean bottom.

Corals and Coral Reefs | Smithsonian Ocean

However, coral reefs are not randomly scattered throughout each of these great ocean basins (see map below).. Why? Because the global distribution of coral reefs is largely determined by the ecological requirements of the reef-building corals themselves.. The coral animals that build tropical reefs require sunlight found in clear, shallow ocean waters. ...
