The ecology of European ponds: defining the characteristics of a neglected freshwater habitat. There is now a need to strengthen, develop and coordinate existing initiatives, and to build a common framework in order to establish a sound scientific and practical basis for pond conservation in Europe.

The history of farm ponds in China dates back to the Sinic civilization over 2600 years ago. Quebei, the earliest pond on record, was constructed during the Spring and Autumn Period (770 BCE to 476 BCE) under the leadership of Sun Shu-Ao, who was the Prime Minister of the Chu State (P.Y. Zhou et al., 2016).

**Ecology in China Virtual Issue - Journal of Ecology**

A concise but comprehensive introduction to the biology of standing waters (lakes and ponds). As with other books in the Biology of Habitats Series, the emphasis in The Biology of Lakes and Ponds is on the organisms that dominate freshwater environments. Management and conservation aspects are also considered.

Garden Ponds Ponds are arguably the richest, most productive and engaging of all wildlife habitats in the garden, hosting a range of wildlife that would otherwise struggle to find a home there, and adding a whole new ecosystem. Even a small garden pond is likely to be colonised by some small invertebrates, and one that is medium-sized is likely to be busy in spring and summer with Common Frogs, newts and a selection of the commoner damselfly and dragonfly species.

Lake ecosystem. A lake ecosystem includes biotic (living) plants, animals and micro-organisms, as well as abiotic (nonliving) physical and chemical interactions. Lake ecosystems are a prime example of lentic ecosystems. Lentic refers to stationary or relatively still water, from the Latin lentus, which means sluggish.

Temperate ponds may be important sinks and sources of greenhouse gases but just how quickly ponds bury carbon (C) is poorly understood. We derived – to the best of our knowledge – the first organic carbon (OC) burial rates for small ponds of known age by digging out the whole sediment from ponds, and determined that the average C burial rate was  $142 \text{ g m}^{-2} \text{ yr}^{-1}$ , with a range of 79 ...
