Environment, Safety & Health. Date and time TBD. The semiconductor industry is an acknowledged global leader in promoting environmental sustainability in the design, manufacture, and use of its products, as well as the health and safety of its operations and impacts on workers in semiconductor facilities (fabs).

Condensed matter physics is the field of physics that deals with the macroscopic and microscopic physical properties of matter. In particular it is concerned with the "condensed" phases that appear whenever the number of constituents in a system is extremely large and the interactions between the constituents are strong.

In condensed matter physics and materials science, an amorphous (from the Greek *a*, without, *morphé*, shape, form) or non-crystalline solid is a solid that lacks the long-range order that is characteristic of a crystal.In some older books, the term has been used synonymously with glass.Nowadays, "glassy solid" or "amorphous solid" is considered to be the overarching concept, and glass the more ...

Li metal is extensively focused because of its ultra-high theoretical capacity (3,860 mAh g<sup>-1</sup>, 10 times higher than that of graphite) and the most negative electrochemical potential (−3.040 V versus standard hydrogen electrode).Relative to non-aqueous electrolyte, solid-state electrolyte exhibits enhanced safety.

Why Penn State? Penn State is the natural home of a new center that can embrace the full range of modern SETI approaches. It offers the breadth and interdisciplinary nature that are a necessary foundation for SETI research, and its deep heritage and leading departments in SETI's component disciplines makes it an ideal host.

Welcome to LED center. Over the years, I've gotten constantly increasing feedback about my LED series resistance calculator. As a followup, I've developed the LED series parallel array wizard which can do so much more. And I've developed this site as a resource for different people with interest in LEDs.
