Steam Traction In The Royal

A steam locomotive is a type of railway locomotive that produces its pulling power through a steam engine. These locomotives are fueled by burning combustible material - usually coal, wood, or oil - to produce steam in a boiler. The steam moves reciprocating pistons which are mechanically connected to the locomotive's main wheels (drivers). Both fuel and water supplies are carried with the ...

A steam engine is a heat engine that performs mechanical work using steam as its working fluid. The steam engine uses the force produced by steam pressure to push a piston back and forth inside a cylinder. This pushing force is transformed, by a connecting rod and flywheel, into rotational force for work. The term "steam engine" is generally applied only to reciprocating engines as just ...

Locomotives with two, three and four cylinders have been commonplace. Six is unusual, but by no means unique; see the SNCF 160-A-1 Reheat Locomotive. Steam-motor locomotives tend to have a lot of small cylinders; for example the French high-pressure 232.P.1 had no less than eighteen. The record is probably held by the 1934 Bugatti proposal for a 2000HP locomotive with two 4-axle bogies, with ...

The primary source of information about books on railway history is George Ottley's monumental bibliography, with its two supplements (no serious public library can claim to be that if Ottley is not available). Jack Simmons' overall evaluative surveys of the literature (both in his own books and in the Oxford Companion - Ottley is mainly non-evaluative) are also useful, but Simmons was less ...

STEAM TRAINS TO THE LEFT, STEAM TRAINS TO THE RIGHT... Introduction by David Hey When asked by Coastline Radio 97.7FM - a local radio station on the Costa del Sol - to talk about train spotting in the Sixties, the idea did not sit easily with me - and just as I feared, when I opened my mouth to speak, a lot of emotional twaddle came out.
