What Causes Cyclic Vomiting Syndrome

Cyclic vomiting syndrome occurs in all age groups, though it often begins in children around 3 to 7 years old. Although it's more common in children, the number of cases diagnosed in adults is increasing.

Cyclic vomiting syndrome - Symptoms and causes - Mayo Clinic

Cyclic vomiting syndrome (US English) or cyclical vomiting syndrome (UK English) (CVS) is a chronic functional condition of unknown cause characterised by recurring attacks of intense nausea, vomiting, and sometimes abdominal pain, headaches, or migraines. CVS typically develops during childhood, usually between ages 3 and 7; although it often remits during adolescence, it can persist into ...

Cyclic vomiting syndrome - Wikipedia

Cyclic vomiting syndrome (CVS) is a condition that is related to migraine headache. Symptoms of CVS include severe nausea and vomiting. Triggers of CVS include emotional stress and infections. In addition to the patient's primary-care physician or pediatrician, gastroenterologists are usually consulted.

15 Cyclic Vomiting Syndrome Symptoms, Causes, Diet, Treatments - MedicineNet - Health and Medical Information Produced by Doctors

The exact cause of cyclic vomiting syndrome is unknown. Although nausea and vomiting are the main features of cyclic vomiting syndrome, researchers now believe that the primary organ affected is the brain and that the symptoms of the disorder develop due to abnormalities in the normal interaction between the brain and the gut (brain-gut disorder).

Rare Disease Database - Cyclic Vomiting Syndrome - NORD (National Organization for Rare Disorders)

Diagnosis. Cyclic vomiting syndrome can be difficult to diagnose. There's no specific test to confirm the diagnosis, and vomiting is a sign of many conditions that must be ruled out first.

Cyclic vomiting syndrome - Diagnosis and treatment - Mayo Clinic
