What Is An Math Expression

The algebra section allows you to expand, factor or simplify virtually any expression you choose. It also has commands for splitting fractions into partial fractions, combining several fractions into one and cancelling common factors within a fraction.

We have learned that, in an algebraic expression, letters can stand for numbers. When we substitute a specific value for each variable, and then perform the operations, it's called evaluating the expression.. Let's evaluate the expression $3y + 2y$ when $5 = y$.

Algebraic Expression An algebraic expression is a mathematical phrase that can contain ordinary numbers, variables (like x or y) and operators (like add, subtract, multiply, and divide). Here are some algebraic expressions: $a + 1$ $a - b$ $3x$ $x - a / b$ In the above expression the "/" means divide. The "3x" means multiply the variable x by 3.

WTAMU Math Tutorials and Help. For example, the area of a rectangle is length times width. Well, not every rectangle is going to have the same length and width, so we can use an algebraic expression with variables to represent the area and then plug in the appropriate numbers to evaluate it.
